Introduction

THE BEST OF PROFURL FOR ALL OUR CUSTOMERS

In 1980 PROFURL developed its first furling system and then quickly became one of the pioneers of this technology, as well as the worldwide market leader.

Today, thanks to its over 40 years of experience in the reefing-furling market, PROFURL is still considered as one of the major market players.

Whatever your sailing program is (cruising, racing, off shore), and depending on the size of your boat or your budget, you will always find the appropriate PROFURL product to equip your yacht.

Our motto: Deliver the best of PROFURL technology to all our customers.

X-Plore expeditions - Profurl in the extreme South
Profurl products are designed and manufactured to work for you, no matter where you want to sail. Perfect for all your needs, from the toughest to the smoothest sailing!

PROFURL:

a comprehensive range of products

PROFURL systems are adapted to any kind of sailing program; off shore races, single handed races around the world, cruising...

- > Manual headsail reefing-furling systems for cruising and racing.
- > Motorized headsail systems for big boats.
- > MK4 in-boom furler: for 15 to 18m boats
- > Flying sails furlers for racing and cruising
- > Stayfurlers for racing and fast cruising

PROFURL: a Wichard Group brand

Made in France: Profurl reefing systems are made in France, guaranteeing quality and peace of mind

The Wichard Group, a world famous French marine hardware manufacturer, took over PROFURL in 2002.

Wichard: specializes in marine hardware: blocks, stainless steel products, tiller extensions...

Product development

R&D: A high involvement

- > Our products are first developed by the R&D department based in Pornichet on the West coast of France. The systems are developed by a team of highly skilled engineers, assisted by the latest computer tools and software.
- > PROFURL products are the result of a tight collaboration between the R&D team and the world's riggers, sail makers and sailors.
- > Each part is submitted to a range of scientific tests in order to test their resistance, beyond what could actually be experienced on a yacht

A rigorous manufacturing process

- > The raw materials are carefully selected and are part of high level specifications, which are planned for extensive use of the systems.
- > The mechanical parts are machined using a controlled patented process, and using extrusions of the purest metallurgical quality. PROFURL systems are not manufactured from castings which can contain impurities causing inherent weaknesses.
- > Each part is micro-balled for a perfect surface finish and then anodised in a special green-gold process in order to assure the best protection against harsh marine environment.

Tests at sea

- > Each new product is submitted to the sea in the most extreme conditions.
- > The systems are also tested by marine industry professionals including some of the world's greatest skippers, sailmakers...

The reasons to choose a PROFURL system

- > A comprehensive range of products meeting your needs.
- > Reliable and performant systems.
- > No maintenance required.
- > A warranty on each product (e.g: 10 year warranty for the manual furling systems).
- > A complete traceability process for a better quality.
- > A professional and efficient assistance.
- > A global network of distributors.
- > Over 30 years of experience in the field.
- > Made in France

Traceability process: each Profurl product is identified by a serial number.

Satisfying our customers first

HIGH QUALITY OF PRODUCTS AND TRACEABILITY

Each system has a serial number engraved in order to trace our products throughout the unit life.

WARRANTY

Each PROFURL product benefits from a world wide warranty: e.g. 10 year warranty for the manual headsail furlers.

ASSISTANCE

Our hotline is available to answer all your questions: product choice, special fitting...

A GLOBAL NETWORK OF DISTRIBUTORS

PROFURL products are distributed in more than 50 countries all over the world through a network of professionals well qualified and regularly trained.

Introduction

Bureau Vallée 3 - IMOCA

Class 40 - Crédit Mutuel

IMOCA 60 equipped with Profurl

Profurl: a major player in ocean racing

Since the 1980s Profurl has been an integral part of regattas and offshore racing history. Boc Challenge, Vendée Globe, Route du Rhum, circumnavigation records, mini transat and more recently the America's Cup... Profurl has stood shoulder to shoulder with skippers and equipped all kinds of racing boats from mini 6.50 to 40 m maxi trimarans.

Our unequalled references

IMOCA: 1st rank
Class 40: 1st rank

**MANUAL REEFING SYSTEMS
CRUISING, RACING &
BELOW THE DECK MODELS**

Manual reefing systems

THE STANDARD-BEARER FOR MANUAL FURLING SYSTEMS

Since the 1980's, Profurl manual furling systems have been designed according to two core principles:

RELIABILITY AND SAFETY

Whatever you're doing at sea, Profurl furling systems ensure smooth sailing under any conditions.

Do you need a furler that can handle severe weather and heavy loads? Thanks to their specially designed mechanisms, Profurl furling systems are the only systems on the market to offer truly reliable furling under severe loads ensuring your safety.

Are you looking for reliability? Profurl furling systems are designed to cover tens of thousands of miles without any specific maintenance. To prove their reliability, a ten-year international guarantee is provided with every model.

Maybe you're in search of extra performance? The weight of the Profurl system has been trimmed down to the minimum. Our Racing range will also improve your craft's overall performance.

Why choose a Profurl furling system?

- > A wide range of PROFURL furling systems for **all sailing applications**.
- > The bearings are maintained in a waterproof grease bath and require **zero maintenance**.
- > **Cruising models** for boats from 5 to 26m, with colourless anodised round reefing foils.
- > **Regatta models** for boats from 6 to 20m, with black anodised oval reefing foils.
- > **A wide range of installation options** to adapt to the deck of your craft
- > Minimised weight.
- > **Guaranteed longevity with corrosion protection** (anodization, insulation)
- > **An international 10-year guarantee.**

A brand-new design that's better for the environment

Profurl furling systems have recently received a design upgrade, abandoning their traditional green anodization for black. This new treatment provides the same level of corrosion protection. It's also better for the environment.

Two ranges of headsail manual furlers

CRUISING SYSTEMS

With 9 models, the Cruising range offers robustness and safety. They are dedicated to boats from 5 to 26 m. They integrate innovations like the double cage arms and the new feeder design. The Cruising models are equipped with silver anodised extrusions.

RACING SYSTEMS

The Racing systems bring performance and ease of use thanks to innovations like the opening pre-feeder delivered as standard. They are dedicated to boats from 6 to 20 m and have been especially designed for the racing-cruising sailors. They are equipped with black aerofoil extrusions.

Manual reefing systems

System components

Swivel:

- Ball bearings sealed in a grease bath.
- Two watertight double lips seals to prevent foreign bodies from entering (water, salt, dust...).

Extrusions:

- Aluminium extrusions (Cruising: round silver anodised / Racing: aerofoil black anodised).
- Light weight specialised alloy.
- Optimum torque resistance.

Drum mechanism:

- Withstands tremendous impact.
- Double cage arms prevent the furling line from jumping off the drum.
- Removable: the headsail can be hoisted and set as per a racing foil.
- The drum mechanism contains a maintenance free ball bearings system.

Wrapstop:

Fixed at the top of the stay, it radically prevents the halyard from wrapping around the stay, and reduces potential halyard chafe.

Feeder (except C290):

- Stainless steel (316L).
- No fitting tool, attachment is made with a Velcro webbing.
- Option: opening pre-feeder from Wichard.

Locking devices:

- Standard ones for Cruising and Racing models with short link plates
- Stainless steel locking devices with insulated bushes (recommended for boats with high/intensive use). Also mandatory in case of closed to deck fitting.
- The locking devices are available for standard, medium and long link plates attachment configurations.

Profurl furling systems: the last word in reliability and longevity

Only Profurl technology offers optimal reliability and longevity. Profurl mechanisms are designed to use special bearings which can furl sails under any conditions.

They are fully waterproof, protecting them from corrosion and contamination for maximum longevity.

High performance systems...

- > The extrusions are made lighter and stronger thanks to a special alloy (6106).
- > The ball bearings have an optimized weight / resistance ratio.
- > The Wichard opening pre-feeder is delivered as standard on Racing models to hoist the sail faster.

...reliable and maintenance free

- > The ball bearings are made of high strength 100 C6 carbon steel and are sealed in a grease bath to increase their working load and prevent corrosion.
- > Watertightness is achieved by the use of two double lip seals preventing foreign bodies (salt, sand, dust, water) from entering the bearing mechanism.
- > The not deformable plastic drums withstand impact (e.g. anchor bump, collision) and are resistant to UV.

Ease of use

PROFURL manual furling systems have been designed to ease operations:

- > The standard feeder enables to easily hoist the sail by only one crew member.
- > The optional opening pre-feeder, manufactured by Wichard, smoothly guides the sail's luff tape into the extrusions, whilst rapidly hoisting the sail. When re-hoisting it, the pre-feeder can be reattached to the luff tape without removing the headsail from the extrusion.

Safety of use

- > Double cage arms (exclusive to PROFURL) prevent the furling line from jumping off the drum and allow the furling line to re-align onto the drum by simply pulling on the line.
- > Stainless steel locking devices are dedicated to boats with a closed to deck fitting.
- > On the C480, C520, C530 and R480 models, special locking devices have been designed to withstand the higher loads.

Reliability of materials

PROFURL rigorously selects the materials to be used for the manufacturing of the different components: these parts are submitted to bench-tests in order to assess their resistance.

- > Ball bearings are made of high strength 100 C6 carbon steel.
- > Drums are made of high impact plastic.
- > Extrusions use a special alloy (6106) and offer one of the best weight / resistance ratios.
- > The feeder and the opening pre-feeder are made of stainless steel (316L), except for C290.

Manual reefing systems

DECK ATTACHMENT CONFIGURATIONS

PROFURL furling systems can be adapted to your boat's configuration, not vice versa. PROFURL offers a wide range of fittings, a description of each fitting configuration is listed below:

Long link plates fitting

Standard fitting with short link plates

Long link plates fitting

Close to the deck fitting with stainless steel lockers

Fitting with turnbuckle cylinder

Below the deck fitting

What kind of fitting for my furling system?

1

STANDARD FITTING WITH SHORT LINK PLATES

Type of locking devices: standard and threaded pin for a stay eye fitting

- ⊕ Raise the drum mechanism in order to clear the deck in case of obstacles (bow roller etc.).
- ⊕ Fitting with adjustment plates is also possible

2

FITTING WITH LONG LINK PLATES

Type of locking devices: standard

- ⊕ The drum can be lifted to avoid interference with the anchor and to reduce the sail chafe on the lifelines.
- ⊕ The forestay length is still adjustable.

3

FITTING CLOSE TO THE DECK

Type of locking devices: stainless steel and smooth pin

- ⊕ Increase the luff length

4

FITTING WITH A TURNBUCKLE CYLINDER

The rigging screw goes into the turnbuckle cylinder.

- ⊕ The furler can be fitted lower to the deck.
- ⊕ It is also possible to use a combination of a turnbuckle cylinder and long link plates.

5

BELOW THE DECK FITTING

- ⊕ An aesthetic solution chosen by some boatbuilders (Bénéteau, X-Yacht). Please contact us for more information.
- ⊕ Adjustable tack fitting

C260: THE FURLING SYSTEMS FOR LIGHT BOATS

Especially designed for boats from 5 to 7 m, the C260 model is a self-contained halyard furling system. Cost-effective, easy to install on the existing forestay, the C260 does not require any maintenance.

> The self-contained halyard system

On light sail boats - especially fractionally rigged - it is usually difficult to obtain a tight forestay. The C260 with its self-contained halyard helps to minimise forestay sag by reducing mast compression created by a combination of loads from the halyard and sail.

> Ease of installation

The C260 does not require a specialised attachment to the forestay stem head, it is simply attached to the lower swage terminal of the forestay (eye and holes plates or turnbuckle).

For boats transported and stored on a trailer, the C260 can be separated in two sections reducing the risk of damage while in transit.

> Ease of use

The self-contained halyard passes over a sheave box fitted into the top of the extrusion and returns down to a sheave and cam cleat. Once the sail is hoisted and tensioned, the remaining length of the halyard is used as a furling line.

Manual reefing systems

CRUISING MODELS

- > Large range of 10 models for boats from 5 to 26 m.
 - > Round and silver anodised profile.
 - > Several fitting possibilities: adjustment plates, long link plates, turnbuckle cylinder, below the deck fitting, stainless steel locking devices
 - > Additional option: opening pre-feeder, stainless steel locking devices
 - > 10 year world wide limited warranty.
 - > **New:** the C290, C320, C350, C420 and C520 models can hold an increased forestay diameter.
- For example: for an 8mm forestay, you can choose a C320 instead of a C350. If using a swageless eye, you must take both the maximum sail surface area and the drum capacity into consideration.

How to choose my furling system?

To correctly select your own furling system, refer to the following steps:

- Step 1: Define your sailing program: cruising or racing-cruising.
- Step 2: Measure accurately the diameter of the forestay (see table below).
- Step 3: Choose one of the fitting systems described on page 14.

		Boat length (meter) & max sail area										
Model	max forestay Ø mm	5 - 7	7 - 9	9.50	10	11	12	13	14	16	18	26+
C260	5	15M ²										
C290	6.35 / 7*		30M ²

Warranty	10 year world wide warranty				

*If using a swageless eye, you must take both the maximum sail surface area and the drum capacity into consideration.

THE SPECIAL R250 FOR J80:

The R250 is the official furling system for the J80 class.

It is available as a complete version or as a kit (to be mounted on Harken extrusions).

The specific swivel system uses ceramic bearings, allowing you to furl the genoa even faster.

Manual reefing systems

BELOW THE DECK MODELS

- > For Cruising models from C290 to C430 and Racing models from R250 to R480
- > Adjustable tack point above the deck
- > Aesthetic solution enabling easier operations with anchor
- > Optimized luff and thus better boat performances
- > 10 year world wide warranty

PRO AM
STRUCTURAL FURLERS

PRO AM STRUCTURAL FURLERS

PRO AM STRUCTURAL FURLERS

With new spools and new swivels, the PRO AM range is getting bigger and better with the new range of NEX flying sail furlers housing mechanisms. PRO AM is a new generation of structural furlers for 5 to 9.5 metre boats designed for "all or nothing" sailing (with sails fully unfurled). The sail is hoisted and hauled thanks to a second swivel called a "halyard swivel". PRO AM also allows you to strike the sail for wintering, maintenance or just for storage after use.

3 sizes available for 5, 6 and 7 mm diameter stays.

Why choosing PRO AM?

- > The ideal system for Day Boats and Sports Boats
- > Light and easy to handle
- > Sail can be hoisted and lowered
- > Possibility to remove easily the halyard swivel only.
- > Quick fitting and removal for trailer boats
- > Profurl system: maintenance-free components mounted in a sealed grease bath.
- > Three-year Profurl worldwide limited warranty.

What's the difference between PRO AM and a classic furler?

Structural

- > The stay fastens directly on the spool and the swivel, so PRO AM supports the mast.

All or nothing sailing

- > Because it is a structural element, PRO AM allows you to sail with the sail fully unfurled or fully furled. A classic furler with extrusions allows you to sail partially furled.

Efficient

- > The PRO AM halyard swivel is fitted with ball bearings to ensure excellent rotation even under heavy loads.
- > PRO AM has light and compact components (spool and swivel) and textile fastening systems on the halyard swivel. With no extrusions to increase windage, the sail enjoys superior performance.

PRO AM applications

- > Day boats
- > Sports boats
- > One designs and class boats (J80, Surprise, Dragon...)

Sail types

- > Jib, solent mounted on snap hook or sleeve

PRO AM: how does it work?

- 1 Unlike a classic furler, the PRO AM has a halyard swivel (or tensioning swivel) which allows you to hoist and lower the sail.
- 2 Attachment of the halyard on the halyard swivel
- 3 The halyard clew of the sail is fastened to the Wichard soft shackle.
- 4 The head swivel allows the cable to rotate and thus furl the sail.
- 5 The tack of the sail is fastened to the Wichard shackle.
- 6 The stay (5, 6 or 7 mm single strand) is fastened to the drum and the swivel at the head
- 7 The stainless steel toggles are fitted to the boat's deck and mast.

Performance

S-GRIP: Better line grip

The special groove design, allowing for deformation of the line, ensures:

- better line grip, even when wet!
- easier furling
- minimum line wear

OPTIMAL FURLING: Furl without effort

The optimal spool diameter provides ideal torque, which:

- makes furling easier
- reduces effort

XTRA-LIGHT SYSTEMS: Lightness first

The size and weight of each component (spool, swivel, and terminals) have been optimised to:

- improve sailing performance
- ensure easier handling of the systems

Safety

SAFE SYSTEM enables you to stop the running of the furling line during deployment of sail and thus:

- prevent accidents or damage caused by a free running line.
- manoeuvre more quickly and easily
- prevent excessive wear of the line

NEX

FLYING SAILS FURLER

NEX

Flying sail furlers

NEX, THE NEW GENERATION FURLER

The new version of the Nex furler is now available with many innovations and technological improvements. These innovations, resulting from our expertise gained since the launch of the first version of the NEX in 2010 will bring you even more performance, safety and comfort when sailing.

Its range of 7 models covers all sizes of sails (up to 350m²) and enables it to equip boats of more than 80'.

Why choose a NEX furler?

- **Performance:** Speed of furling, weight and optimized footprint
- **Comfort and safety** during furling/unfurling operations FurlAssist (pawl function), ease of furling
- **Ease of use:** easy installation, fast and intuitive sail trimming
- **Reliable,** proven and maintenance-free technology
- **Wide range of end fittings** for better adaptation to your deck layout
- **Product with modern design**
- **3-year international warranty**

What types of sails?

NEX furlers are intended for flying light wind or heavy sails. Developed in partnership with the largest sailmakers, the NEX furlers allow you to get the best out of your sails while handling them easily and safely

↘ **Light sails:**
Gennaker, Code 0, Screacher, light genoa

↘ **Heavy sails:**
• Solent, stay sail

NEX furlers: the reference in the racing world:

Since their launch in 2010, NEX furlers have often been in the lead in offshore races and have been chosen to equip the most efficient yachts:

- IMOCA,
- Class 40,
- Ultim,
- Multi 50,
- M32,
- Mini 6.50
- Etc...

Classe 40 - Inter Invest - Matthieu Perraut

NEX

Flying sail furlers

SAFETY

SAFE SYSTEM : Removable line

Already present on the 1st generation of NEX, the SAFE SYSTEM enables you to stop the furling line running during sail deployment and therefore helps:

- prevent accidents or damage caused by a free running line.
- manoeuvre more quickly and easily
- prevent excessive wear of the line

NEW TERMINALS:

- Swivel eye
- Compact halyard block
- Solid sheave

See pages 30 and 31

PERFORMANCE

OPTIMUM FURLING : Furl quickly and without effort

A real technological improvement, Nex drums are the widest on the market and provide:

- Fast furling speed
- Comfortable furling needing less effort during manoeuvres. A real advantage with small crews

XTRA-LITE SYSTEMS : Continuously striving for lightness

The general design and the choice of materials enable us to offer systems that are ever lighter for:

- Improved performance of the boat
- Ease of use of the systems during manoeuvres

S-GRIP : Better line grip

The specific design of the drum groove provides:

- Better rope grip
- Easier sail furling without skidding
- Limited rope wear

NEW :
Anti-shock housing for
better protection and longer life

EASY TO USE

I-CONNECT : **Quick fit sailing system**

Available on swivel shackle and drum mechanisms, I-Connect offers:

- Quick opening and closing of the pin by pulling on the ball (regardless of the direction of the force)
- Excellent grip (even with gloves)
- A simple new mechanism without jamming - easy to dismantle

QUICK FIT : **Line Fitting**

Already present on the 1st NEX, Quick Fit makes fitting and removing a spliced line quick and easy:

- Quick Installation
- Possibility of splicing to length
- Possibility of leaving the line in position
- Possibility of using the same line for several systems

TUNE & LOCK : **Easy fitting and adjustment**

Installation and adjustment of the housing is made simple with a single screw:

- Precise adjustment of the housing according to the orientation of the line
- Decreases the friction of the line on the housing
- Automatic height adjustment of the housing

INNOVATION!

FURLASSIST: **INTUITIVE AND SAFE ASSISTANCE** **FOR FURLING**

A MAJOR INNOVATION of this new Nex range, the FURLASSIST ratchet function is a real plus for your manoeuvres allowing::

- Better control of furling avoiding accidental unfurling of the sail
- Reliable furling due to the permanent engagement of the pawl
- Safety: it only unlocks when hauling in the line fast
- Simplicity: operates in both directions and without additional line
- Easy installation and removal (2 screws)

** The working loads shown are the maximum working loads of the mechanisms only and are not the loads of the complete system when terminals are included. The product should not be used above these working loads in any circumstances.

Profurl + points: Proven and unique technology

- Performance even under high loads
- Reliability and longevity of the mechanisms

NEX furlers and manual furlers share the Profurl technology that has created the reputation of the brand: Profurl mechanisms are the only ones to use bearings made from very hard **100C6 carbon steel** which allow furling even under high loads (no crushing of the balls). The mechanism is mounted in a waterproof grease bath and is protected from external aggressions (salt, sand, etc.) and does not require any maintenance.

NEX

Flying sail furlers

ACCESSORIES

SOFT SNATCH BLOCKS - FOR 2/1 HALYARD

5 models available - Rope size: 10 to 24 mm.
Sheave and cheeks in anodised aluminium

STAINLESS STEEL AND ALUMINIUM THIMBLES

Available in stainless steel or aluminium, their form facilitates the positioning of the sail in the mechanism forks. Their cut-outs allow good positioning of the lashings avoiding excessive wear. Stainless steel thimbles are an economical solution. Aluminium thimbles provide performance and lightness; they are used for racing programmes.

CABLE-FREE THIMBLES

The cable-free thimbles aim at being installed on sails without furling cable. Their specific design enables the optimized furling and easy fitting of the webbings. Available in 3 sizes for NEX2.5, 4.0, 6.5 and 8.0

ANTI-TORSION CABLE CLAMPS

For anti-torque cables (dia 9, 11, 13 and 15 mm)
- Can be used for gennaker with Marlow ProDrive +
- Can be used for asymmetric spinnakers with most of the anti-torque cables available on the market
- Material : Duplex grade stainless steel

ANTI-TORQUE CABLES :

Profurl offer anti-torque cables cut at length in various diameter
• Dynex Hampidjan cable - available in 9, 11, 13 and 15 diameter
• Cable Marlow ProDrive2 - available in 9, 11, 13 and 15 diameter

SPLICED FURLING LINES

Available in 8 and 10 mm diameter - From 12 to 26 m. High quality spliced furling line offering higher product lifetime. Prevents the risk to be locked into the spool. More information on page 42

PROTECTION COVER

Our protection covers are available for the NEX spools and swivels as well as for the swivel locks. They will help increase the product lifespan and protect your boat against accidental shocks. Highly resistant, they also have a reflective strip for nighttime.

FLYING SAIL FURLER WITH DRUM

- > With a drum and a single furling line similar to manual headsail furler.
- > Economical system.
- > Easy to install on board

Contact us for more information

Non contractual photo

FLYING SAILS FURLER NEX SPEED

The NEX SPEED is the Racing version of the NEX. Available in NEX2.5 and NEX4.0 versions, they feature the same mechanisms but with more compact spools. It is the perfect unit for regatta and offshore racers looking for enhanced manoeuvrability, performance and weight..

Why choose the NEX SPEED?

- > Quick furling
- > Light and compact
- > Strength (working load: 2.5T & 4T)

User programme for the NEX SPEED

- > Sport boats
- > Single-hulled, type Figaro 3, L30, etc.
- > Foil catamarans type TF35, multi-hulled type GC32
- > Class 40

SPINEX

TOP DOWN
SPINNAKER FURLER
WITH RATCHET

Top down spinnaker furler

SPINEX

First launched a decade ago, the next generation of SPINEX includes new innovations to provide even greater user comfort and enhanced furling performance.

SPINEX in short:

- > 6 models available: SPINEX 0.9, SPINEX 1.5, SPINEX 2.5, SPINEX 4.0, SPINEX 6.5 and SPINEX 8.0
- > For boats from 5 to 18m long, and asymmetrical spinnakers up to 400 m²
- > All-in-one system: mechanisms, anti-torque cable, fittings, flexible PVC sleeves, 2-in-1 thimbles, and a swivel tack point
- > The SPIN KIT is available separately for use on NEX reefing systems and other brands on the market (Facnor, etc.)
- > Integrated Profurl technology
- > International 3-year guarantee

Why choose Spinex

Easy to use, safe, efficient, adaptable

Using asymmetric spinnakers in some conditions can be dangerous. With the Spinex, you're going to rediscover the joys of this type of sailing because it allows you to:

- > Easily handle this type of sail (even short-handed)
- > Remain in the safety of the cockpit
- > Improve the performance of your sailing-boat by using downwind sails

Adaptable: One system for many uses

The Spinex can easily be converted into a NEX by removing the swivel tack from the drum and the end fittings, and then it can be used for sails like a gennaker or a code zero.

Innovations in the next generation of SPINEX solutions

Greater furling comfort and performance

Easy to use, offering improved performance for your sailing boat:

- Replacement of the traditional balls with a flexible PVC sheath, offering full UV and twist resistance
- Up to 50% reduced weight
- Easy to store once the sail is furled

Improved furling performance:

- One specific anti-torque cable diameter per model
- Improved furling, adapted to the size of the sails

Easy to install

- A new, innovative 2-in-1 thimble: thimble + clamp for faster installation

Top down furling

> When it comes to asymmetric spinnakers, top down furling is the best solution for bringing in your sail. The concept first appeared on maxi yachts before filtering down to more modestly-sized sailing-boats.

> Thanks to its swivel tack, the sail can be furled from the top downward to progressively stifle the sail without creating a jam.

Which sails ?

> The Spinex is designed to furl flying sails with a loose luff, such as asymmetrical spinnakers.

> Gennakers, code zeros, staysails and so on can be furled using a NEX furler (see page 24 of this catalogue).

- 5 PVC sleeves to protect the sail
- 6 Anti-torque cable
- 7 Spool & swivel

FURL ASSIST RATCHET: A MAJOR INNOVATION

A REAL PLUS FOR FURLING OPERATIONS

- Better control of furling
- Avoids accidental unfurling of the sail
- Permanent engagement of the pawl
- Safety: unlocks when hauling in the line fast
- Operates in both directions
- No additional line
- Easy installation and removal (2 screws)

SPINEX

ADVICES FOR USING THE SPINEX

1st time:

> When setting for the first time, we recommend you do this in light winds. Check all halyard and sheet leads.

Furling:

> Tension must be applied to anti-twist cable by hauling on the halyard. It should be taut and stable. Be careful not to apply excessive tension, especially when you use an electric winch.

Direction of furling:

> As the anti-twist cable is a shape-memory component, we recommend you always furl your sail in the same direction to facilitate handling.

Wind angles:

> When unfurling the sail, stay within an apparent angle of between 90 and 120 degrees to help setting.

When furling, the apparent angle must be within 130 and 150 degrees (with the mainsail set to the head of the mast).

NDE2 / NDH2 MOTORIZED FURLERS

NDE2 / NDH2: Motorized furlers

All Profurl motorized furlers have been developed to bring you comfort, reliability & safety.

For the NDE2 C350, C420 and C430, Profurl has developed a new engine power system (multi-motor) that make furlers more economic and compact to gain space on the deck.

NDE2 C480, C520, C530 & C600 benefit from the NDE Profurl technology (mono motor) developed and experienced for more than 30 years. These furlers are specifically dedicated to boats from 14m.

Benefits of the motorized systems

- > Easy operations and without effort
- > Safety: operations from the cockpit
- > Ideal for solo or short-handed sailing
- > Large range of systems.
- > Great comfort with minimal noise.
- > Easy installation on the existing forestay.
- > Low power consumption & minimal noise.
- > Capability to convert a manual furler into a motorized furler
- > 2 or 3 year world wide limited warranty.

NDE2 / NDH2: Motorized furlers

TOTAL COMFORT AND TOTAL SECURITY

When you choose a Profurl motorized furler, comfort and ease of use come guaranteed, allowing you to get the most out of your sailing.

- > Navigation without any physical effort required through the command box (wired or remote-control options available)
- > The sail can be furled in either direction
- > Generates minimal noise
- > No specific upkeep required
- > The auto-locking mechanism prevents the sail from unfurling at inopportune times
- > The circuit breaker lets you cut supply in an emergency (jammed genoa sheet, incorrect manoeuvre, etc.)
- > In case of problem, the emergency system will let you furl or unfurl the sails manually

PROVEN RELIABILITY

Our NDE2 / NDH2 furlers have been designed to offer unmatched reliability, whatever the sailing conditions:

- > 30 years of experience designing gearmotor reducers
- > The structure and the design of our NDE2 / NDH2 reducers is based on more than 20 years of developing NDE systems
- > The use of high-quality materials ensures enhanced durability and longevity
- > Carefully selected surface treatment ensures effective corrosion resistance
- > The robust extrusions support higher torque couples
- > The vent eliminates any internal condensation (only for models from NDE2 C480, to NDE2 C600)
- > Highly resistant and ISO 10133 compliant electrical cables (only for models from NDE2 C480, to NDE2 C600)

PERFORMANCE

Profurl furlers have a specially designed motor system which lets you manoeuvre the sails quickly, easily and repeatedly.

- > The torque / speed ratio is optimal, meaning you can unfurl and furl in all sailing conditions
- > Power consumption is a crucial feature on a motorized system; the Profurl systems require a low power supply, making special batteries unnecessary

EASE OF INSTALLATION

- > Can be adjusted to suit your existing forestay
- > NDE2 / NDH2 furlers are available in a range of assembly configurations (stainless steel tube or link plates) meaning they can be adapted to suit the layout of your deck
- > The capacity of the turnbuckle cylinder is increased by 100 mm for the C520, C530, C600 (Ø 22mm forestay with turnbuckle).

MODERN DESIGN

The new design means they can be used on all deck layouts and modern sail designs, having already been used on major sailing boats (Amel 50, CNB 66).

SAFETY

In case of power supply failure, the PROFURL motorized system includes a handle socket (handle supplied) located at the rear of the housing, allowing for instant manual operation.

MOTORIZATION KIT:

Capability to convert a Profurl manual furler into a motorized furler by keeping the extrusions. For other brands, contact us.

*Sailing becomes
a pleasure!*

NEX^e

**MOTORIZED
FLYING SAILS FURLER**

NEX^e

Motorized flying sails furler

OPERATING FLYING SAILS SAFELY AND WITHOUT EFFORT

NEX^e is a motorized flying sail furler dedicated to operate large sails like spinnaker, gennaker or code 0 on sailing boats. When sailing short-handed, the operation of large sails on 45 – 60 foot sailboat can be complicated. NEX^e aims at easing furling and jibing operations by controlling the sail safely and without effort. NEX^e is available in 2 sizes: NEX^e Lite4.0 & NEX^e 8.0 for sails up to 250 sqm.

Benefits of motorized flying sail furler NEX^e

- > Easy operations and without effort
- > Safety: operations from the cockpit
- > Ideal for solo or short-handed sailing
- > Fast furling operation
- > Easy to install
- > No accidental release of the sail
- > Reliable: Tested in all weather conditions
- > Sealed unit – no maintenance
- > 3 year worldwide warranty.

Types of sails

- ↳ > Gennaker
- > Code 0
- > Asymetrical spinnaker (with swivel tack point)

Average sail area

- ↳ > Gennaker max sail area: from 140 to 300 sqm
- > Asymetrical spinnaker max sail area: from 200 to 400m²

A comprehensive range - 2 models

Profurl offers you 2 models - NEX^e Lite 4.0 and NEX^e8.0 - which cover most boat sizes.

↘ NEX^e 8.0: for yachts above 50'

- 1st model to be launched in 2018
- Mono-engine proven and robust technology
- Sail area: above 140 m² and up to 300 m²
- Integrated anti-shock casing and ergonomic handle
- No accidental sail unfurling
- Available in 12V and 24V

↘ NEX^eLite 4.0: compact and light for medium boats

- New model launched in 2022
- Compact and light
- Multi-engine technology
- For sails up to 140 m²
- No accidental sail unfurling
- Available in 12V
- Delivered with protection cover and storage bag

Manual flying sail furler replacement

Your boat is already equipped with a manual furler and you want to go electric? No problem, thanks to the motorization conversion kit, you can go electric. This kit only includes the gear box, and you will keep using your current swivel. The motorization kit is available for both models NEXeLite 4.0 and NEXe 8.0.

POWERTACK & TACK+: J2 cunningham trimming

INNOVATION & PERFORMANCE

- Perfect system enabling to adjust the sail cunningham
- Sail profile optimization
- Designed for headsail geared on stayfurlers (J2 - Imoca)
- Specifically developed for offshore racing
- Tested by Holcim-PRB and Malizia during The Ocean Race 2023.

Tack+ version - with inner swivel

AVAILABLE IN 2 VERSIONS

- **Tack+** : with inner swivel
- **Powertack**: cunningham line trimmed directly by external purchase

Powertack version

ACCESSORIES: Tackplate - flying sail furler thimbles

Benefits

- 2 models: lashing or fork
- For flying sails fitted with anti-torque cable or not
- Developed with sailmakers for IMOCA class
- Specific design for a better webbing alignment and load sharing
- For 7T & 8T flying sail furlers
- Suitable with Profurl, Facnor and Karver furlers
- Lightweight
- Material: aluminium & stainless steel
